

NP[®] Glove - Cosmetic care for skin under heavy strain

Initial situation:

Before application:
The skin on the hands and forearms was heavily stressed, dry and visibly irritated due to frequent contact with disinfectants (e.g. alcohol and chlorhexidine).

Application over 4 weeks:

Week 1: daily application
Week 2–4: application every other day

Result after 4 weeks of cosmetic application:

The skin appears visibly smoother, more nourished and better protected.

Note:

The results shown refer to cosmetic effects observed through the use of NP[®] Glove. NP[®] Glove is registered in Europe as a cosmetic product and is intended to protect and care for the skin.
